

## Thomson Reuters Data Hub: The data you need. Wherever you need it.

Imagine instant access to your data, whenever and wherever you want it. Imagine seamless connections between business systems, so you don't have to risk manually inputting and reformatting the same data over and over again. Imagine complete control over your data from one central location.

You no longer have to imagine with **Thomson Reuters® Data Hub**.

We know every company has different systems, uses, and needs for their data, and we want to make it easier than ever for you to have your data at your fingertips, wherever and however you want it. Data Hub allows you to do more with your data than ever before.

**Get your team out of  
the data weeds so they  
can focus on  
higher-level analysis  
and tasks with Data Hub.**

### Save time throughout the entire data management process

Input your data just once and leverage it across any applications you'd like to use it in. Size and format restrictions are a thing of the past with Data Hub, which can handle large volumes and allows data to be accessed from multiple external systems with ease.

### Expand the use of your data

Once data is received, Data Hub allows you to strengthen, classify, and enrich the data to make it even more useful and streamlines your existing processes. Third-party connectivity makes it easier than ever to leverage your enhanced data across any number of visualization and analytical tools.

### Reduce risk

With complete governance, you control your data with automated, no-touch processes, ensuring your critical needs are met every time, without the risk of manual error. By seamlessly automating the transfer of data between ONESOURCE and third-party applications for use and reuse, Data Hub is a centralized data repository that allows users to spend less time manipulating their own data to conform to other disparate formats and more time analyzing and using the data for higher, value-added strategic needs.

**With Data Hub, you have:**

FEATURE	BENEFIT
Automates data centralization from disparate systems and in disparate formats without the need for manual intervention	Save time by removing the need for tedious manual steps before repurposing your data.
Data is classified how you define it	Obtain complete control and governance over your data being stored.
Intuitive validations against known information	Certify data and receive real-time updates, so that any new information or changes that may have been made are known and applied logic.
User-defined enrichments to provided data	Augment your data and enrich as you'd like, making it more useful once processed.
One source of truth with platform-level access to your data	Feel confident in long-term data accessibility and simplify data access through one storage location.
Enables administration of company information for entities and charts of accounts in the platform	Save time and streamline your processes by no longer needing to make updates in multiple applications.
Leverage data across multiple applications	By connecting to other ONESOURCE applications or third-party tool, the possibilities are endless on what you do with your data next.
